

## Steps:-

### **A. On Subscriber(Relay raspberry pi):**

1. Put light.php in var/www/html folder.
2. Run nginx server. Then open <http://localhost/light.php>. Adjust value of minimum and maximum.
3. PWD directory containing project files, run: `sudo python subscriber.py`
4. Run: `python PathControl.py`.
5. Give user "www-data" chown for init.json file. Run : `sudo chown www-data init.json`

### **B. On Publisher(Camera Raspberry pi):**

1. Connect camera to raspberry pi.
2. Run main.py once subscriber is listening.
3. Time to publish changes can be modified in main.py.
